

Environmental and Energy Policy

As an international ODM / OEM manufacturer, Ennoconn Corporation understands the risks and opportunities of the interactions between business, operations, the ecosystem and the energy supply, therefore Ennoconn Corporation is committed to fulfilling its corporate social responsibility and protecting and contributing to the environment through a variety of energy innovations and intelligent management solutions, and is fully committed to introducing the ISO 14001 Environmental Management System and the ISO 50001 Energy Management System at its headquarters. This policy is promoted and implemented by the Administration Department under the oversight of the Sustainable Development Committee. The Company promotes the adoption of this policy and requires its application to the operations of Ennoconn Corporation and its subsidiaries, with relevant requirements extended to suppliers and business partners. Ennoconn Corporation works together with employees, customers, shareholders, investors, and other stakeholders to fulfill the following environmental protection commitments.

1. Comply with Laws and Regulations.

Comply with environmental protection and energy management laws and regulations, include suppliers and business partners within the scope of management, and regularly review compliance.

2. Pollution Prevention.

Prioritize the use of low-pollution and low-energy-consumption materials, and commit to the continuous improvement of environmental performance.

3. Energy Resource Management.

Promote the use of renewable energy and pursue the optimal efficiency of resource recycling.

4. Energy Saving and Carbon Reduction.

Set short, medium, and long-term greenhouse gas emissions reduction targets, and continuously track and reduce carbon emissions.

5. Stakeholder Engagement.

Raise employees' awareness of their responsibilities for environmental protection and energy conservation through training and education, support the procurement of energy-saving products, and incorporate communication and feedback from external stakeholders into the implementation and improvement of the policy.

Ennoconn Corporation also shares relevant knowledge and experience externally to strengthen collaboration with subsidiaries, suppliers, and strategic partners.

6. Continuous Improvement.

Continue to introduce relevant environmental management systems, incorporate energy management activities into the design of energy efficiency improvements, and set targets and objectives to reduce environmental impacts.

Ennoconn Corporation continues to conduct education and awareness-raising activities for internal and external stakeholders, enabling them to understand its environmental management status and performance. Ennoconn Corporation also publicly disclose its commitment to the policy.
